

Slipol[®]

Foaming agents and stabilizers

- Finely pored foam structure
- Neutral in odour

Slipol® contains surface-active substances used to produce latex foams, thus acting as foaming agents and foam stabilisers. They can also be not only used for the various processes of foam coating but also in moulding shaped parts.

For foams based on SBR and natural latex following the gelling process, the quantities used depend on the method and the filling level of the latex. We will be happy to provide you with application recipes on request.

To produce foams that are not gelled, we recommend Slipol® U 58 and Slipol® S 68. These are also used for foaming other polymer dispersions.

Slipol® U 55 was specially developed to mechanically stabilize natural latex.

Slipol® is added to the polymer dispersion in question to pre-stabilize it and to guarantee good dispersing of any extenders and vulcanisation systems there might be.

Contact our sales team with specific problem situations or to work out guideline recipes.

Slipol® Foaming agents and stabilizers

Product characteristics						
	Slipol® S 13	Slipol® S 13-1	Slipol® F 21	Slipol® U 58	Slipol® S 68	Slipol® U 55
Solids content [%]	23 - 25	21 - 23	17 - 19	32 - 35	28 - 30	24 - 25
pH-value	11,7 - 12,7	11,7 - 12,7	9,5 - 10,5	6,5 - 9,5*	7 - 9*	6 - 8
Storage	Cool and frost-free (+5 to +30 °C)					
Stability in storage	6 months
